

Stradbroke science principles.

At Stradbroke, science aims to ignite children's curiosity, allowing them opportunities to explore and providing them with the experience and skills they need to become scientifically literate citizens of the future.

To do this, our science curriculum is designed to follow the 4Es teaching sequence: engage, explore, embed, enhance.

Engage

Science is going well at Stradbroke when excited and enthusiastic children are asking questions about their learning.

Explore

Science is going well at Stradbroke when children are allowed to be independent learners and work practically to investigate and discover new things for themselves.

Embed

Science is going well at Stradbroke when children are able to use scientific vocabulary to talk confidently about their discoveries.

Enhance

Science is going well at Stradbroke when children are able to apply their scientific knowledge to the world outside their classroom.
