

Musycle Guitar

Your child will love creating songs and melodies on this recycled guitar. Guitars can be made from many materials and a few elastic bands - you can have great fun trying to make guitars with different materials. Follow these instructions to make a guitar that has a neck (just like a real one).

You will need:

A cardboard box with a lid (a shoe box would work for this)

A long cardboard tube (like you get in kitchen roll or in tin foil)

Glue

Sticky tape

Scissors

Decorations (optional)

Instructions:

1. Carefully cut a hole in the lid of the box (like the sound hole in a guitar) and glue the box lid to the box.
2. Attach the cardboard tube to one end of the box using glue and sticky tape.
3. Add the elastic bands so that they go over the sound hole. You can choose how to attach the elastic bands as this may affect the sound.
4. Finally, decorate your instrument and you have your own musycle guitar!
